· **Special hazards arising from the substance or mixture:**

At high temperatures, this type of fertilizer can give off undefined fumes. Fine dust dispersion in air may form an explosive mixture. Bulk wetted material may generate heat upon storage. Use of TEFC electrical equipment is advised to aid in control of dust-caused explosions. Control fugitive dust at its' source by containment or treating Milorganite with a dust suppressant.

· **Advice for firefighters:**

Do not breathe fumes. Prevent runoff from entering drains, sewers or any body of water. Becomes slippery when wet, guard against falls.

· **Protective equipment:**

As in any fire, wear self-contained breathing apparatus pressure-demand (NIOSH approved or equivalent) and full protective gear to prevent contact with skin and eyes.

* 6 Accidental release measures

· **Personal precautions, protective equipment and emergency procedures:** Not required.

· **Environmental precautions:** Do not allow to enter sewers/ surface or ground water.

· **Methods and material for containment and cleaning up:**

Sweep, vacuum or shovel material into labeled container. If at all possible, reuse product. Ensure that disposal is in compliance with local, state or federal regulations.

· **Reference to other sections:**

See Section 7 for information on safe handling.

See Section 8 for information on personal protection equipment.

See Section 13 for disposal information.

· **Information about storage in one common storage facility:** Not required.

· **Further information about storage conditions:**

Some coprophagic canines (fecal eating dogs) may be attracted by the odor of biosolids, transfer their fecal attraction to Milorganite® 6-2-0 fertilizer, rip open bags in storage and over eat. A dog may be sick for 24 to 48 hours, beginning with vomiting that can lead to dehydration, incontinence (stiffness in the hind legs), atrophy, depression, and black stools due to the high carbon content of Milorganite® 6-2-0. In most cases, symptomatic care prescribed by a veterinarian will relieve these symptoms.

- **On the eye:**
Irritating effect.
Causes serious eye irritation.
- **Additional toxicological information:**
As a recycled product made by a municipal water reclamation facility, biosolids have the potential to contain various pollutants. The U.S. Environmental Protection Agency has extensively analyzed the risk from these pollutants. These analyses have considered over 400 compounds, including metals, volatile and semi-volatile organic compounds, pesticides, furans, dioxins, polychlorinated biphenyls, and polybrominated diphenyl ethers. These analyses have concluded that only metals present significant risks at the levels likely to be found in biosolids. In response, the U.S. Environmental Protection Agency has established limits for nine metals (40 CFR 503.13(b)). Metals concentrations in Milorganite® are consistently far below the applicable limits (40 CFR 503.13(b)(1)Table3).

In biosolids, pathogens may present a risk. In response, the U.S. Environmental Protection Agency has established pathogen limits. To destroy pathogens, Milorganite® is heated to 176° F and dried to a moisture content of less than 10%, which ensures compliance with the applicable limits (40 CFR 503.32(a)(7)).
